

### Business Case: Compliant Storage of SAP Archive Files, Documents, Print Lists

SAP archive files, documents, and print lists should be stored in a Fixed Content Store or in the Cloud.

A Content Management System (for example OpenText) should be replaced by a low-cost and easy-to-use solution for compliant storage.

Introduction of a GDPR-compliant storage system.

#### Solution

#### Your advantage

##### Lean and high-performing Interface Solution

- Pure interface solution to directly connect modern fixed content storage systems or in the cloud to SAP systems without using an own database (support of all hyperscaler and leading storage providers)
- Cloud-based operation possible
- Supports SAP ArchiveLink and WebDAV 3.1 protocols
- Certified by SAP SE for ERP and S/4HANA

- Easy installation, minimal administration effort
- Monitoring via SAP system, no own user interface
- Data compression for an optimal usage of the storage platform
- Special caching option accelerates access to SAP archive files (ADK)

- Full support of SAP Retention Management and thus an important component to fulfill the GDPR guidelines
- Retrieval of stored data, documents, and print lists via the SAP system
- Content Reader: user-friendly data retrieval via SAP GUI or Fiori App

For more than 30 years, more than 1,700 well-known customers worldwide rely on our SAP add-on solutions. These solutions aim at making fully advantage of data archiving to increase substantially the SAP system performance, reduce databases, or decommission systems at low cost. At the same time, we provide an integrated access to online, archive, and external data to meet all requirements for GDPR (General Data Protection Regulation) and GoBD (German legal accounting standards).
